## About The Project

This project is for learning about kubernetes observability.

[\(back to top\)](#)

## Built With

[\(back to top\)](#)

## Getting Started

This project is for getting started with kubernetes observability tools and best practices.

Some tools for learning:

- Prometheus
- Alertmanager
- Grafana
- Grafana Loki
- Grafana Tempo
- Grafana Alloy

## Prerequisites

- Linux System Up
- Cluster Kubernetes Up
- Git

## Installation

Clone the repo

```
git clone https://github.com/marcossilvestrini/kubernetes-observability.git
cd kubernetes-observability || exit
```

[\(back to top\)](#)

## Usage

I publish some exemples for use in this repository.

[\(back to top\)](#)

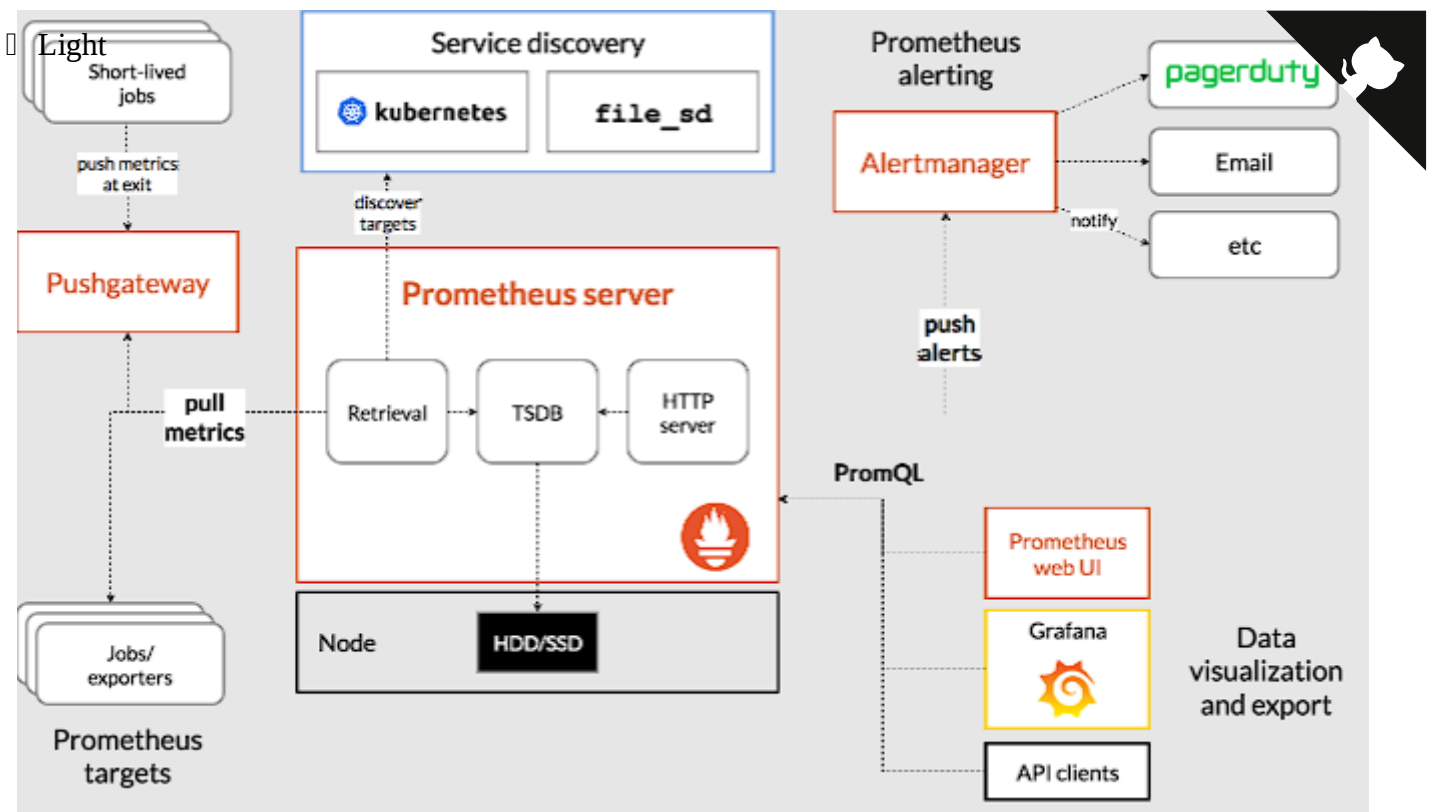

## Roadmap

- ☒ Create repositoty
- ☐ Prometheus
- ☐ Alertmanager
- ☐ Grafana
- ☐ Grafana Loki
- ☐ Grafana Tempo
- ☐ Grafana Alloy
- ☐ Others tools

See the open issues for a full list of proposed features (and known issues).

[\(back to top\)](#)

## Prometheus

Prometheus is an open-source systems monitoring and alerting toolkit originally built at SoundCloud.

Since its inception in 2012, many companies and organizations have adopted Prometheus, and the project has a very active developer and user community.

The Prometheus ecosystem consists of multiple components, many of which are optional:

- the main Prometheus server which scrapes and stores time series data
- client libraries for instrumenting application code
- a push gateway for supporting short-lived jobs
- special-purpose exporters for services like HAProxy, StatsD, Graphite, etc.
- an alertmanager to handle alerts
- various support tools

For more information about Prometheus access official documentation:

<https://prometheus.io/docs/introduction/overview/>

## Install Prometheus

```
# Download files - https://prometheus.io/download/
wget https://github.com/prometheus/prometheus/releases/download/v2.51.2/prometheus-2

# Extract files
tar xvfz prometheus-*.tar.gz
rm prometheus-*.tar.gz
cd prometheus-*
```

```
□ Light
# Check version
./prometheus --version
```

## Configure Prometheus

```
vim prometheus.yml

# my global config
global:
  scrape_interval: 15s # Set the scrape interval to every 15 seconds. Default is every
  evaluation_interval: 15s # Evaluate rules every 15 seconds. The default is every 1
  # scrape_timeout is set to the global default (10s).

# Alertmanager configuration
alerting:
  alertmanagers:
    - static_configs:
      - targets:
        # - alertmanager:9093

# Load rules once and periodically evaluate them according to the global 'evaluation
rule_files:
  # - "first_rules.yml"
  # - "second_rules.yml"

# A scrape configuration containing exactly one endpoint to scrape:
# Here it's Prometheus itself.
scrape_configs:
  # The job name is added as a label `job=<job_name>` to any timeseries scraped from
  - job_name: "prometheus"

    # metrics_path defaults to '/metrics'
    # scheme defaults to 'http'.

    static_configs:
      - targets: ["localhost:9090"]
```

## Start Prometheus

```
# Start
./prometheus --config.file=prometheus.yml

# Start with PM2 - npm install pm2@latest -g
pm2 start prometheus --name prometheus-server -- --config.file=prometheus.yml
```

## Important Endpoints

□ Light

```
http://localhost:9090 # all endpoints
http://localhost:9090/graph # PromQL expressions
http://localhost:9090/metrics # metrics
```

## Using the expression browser

You can use the expression in Table or Graph mode.

Open the page <http://localhost:9090>

```
# Check all http metrics
promhttp_metric_handler_requests_total

# Check http metrics with http status code 200
promhttp_metric_handler_requests_total{code="200"}

# Count http metrics
count(promhttp_metric_handler_requests_total)

# Rate function
rate(promhttp_metric_handler_requests_total{code="200"}[1m])
```

## Prometheus Exporters

### Node Exporter

The Prometheus Node Exporter exposes a wide variety of hardware- and kernel-related metrics.

#### Instal Node Exporter

```
# Download - https://prometheus.io/download#node_exporter
wget https://github.com/prometheus/node_exporter/releases/download/v1.7.0/node_exporter-*.tar.gz

# Extract
tar xvfz node_exporter-*.tar.gz
cd node_exporter-*.tar.gz
```

#### Start Node Exporter

```
# Start
./node_exporter

# Start with PM2 - npm install pm2@latest -g
pm2 start node_exporter --name node_exporter
```

#### Endpoints Node Exporter

Light  
# Access metrics  
http://localhost:9100/metrics

## Configure Node Exporter

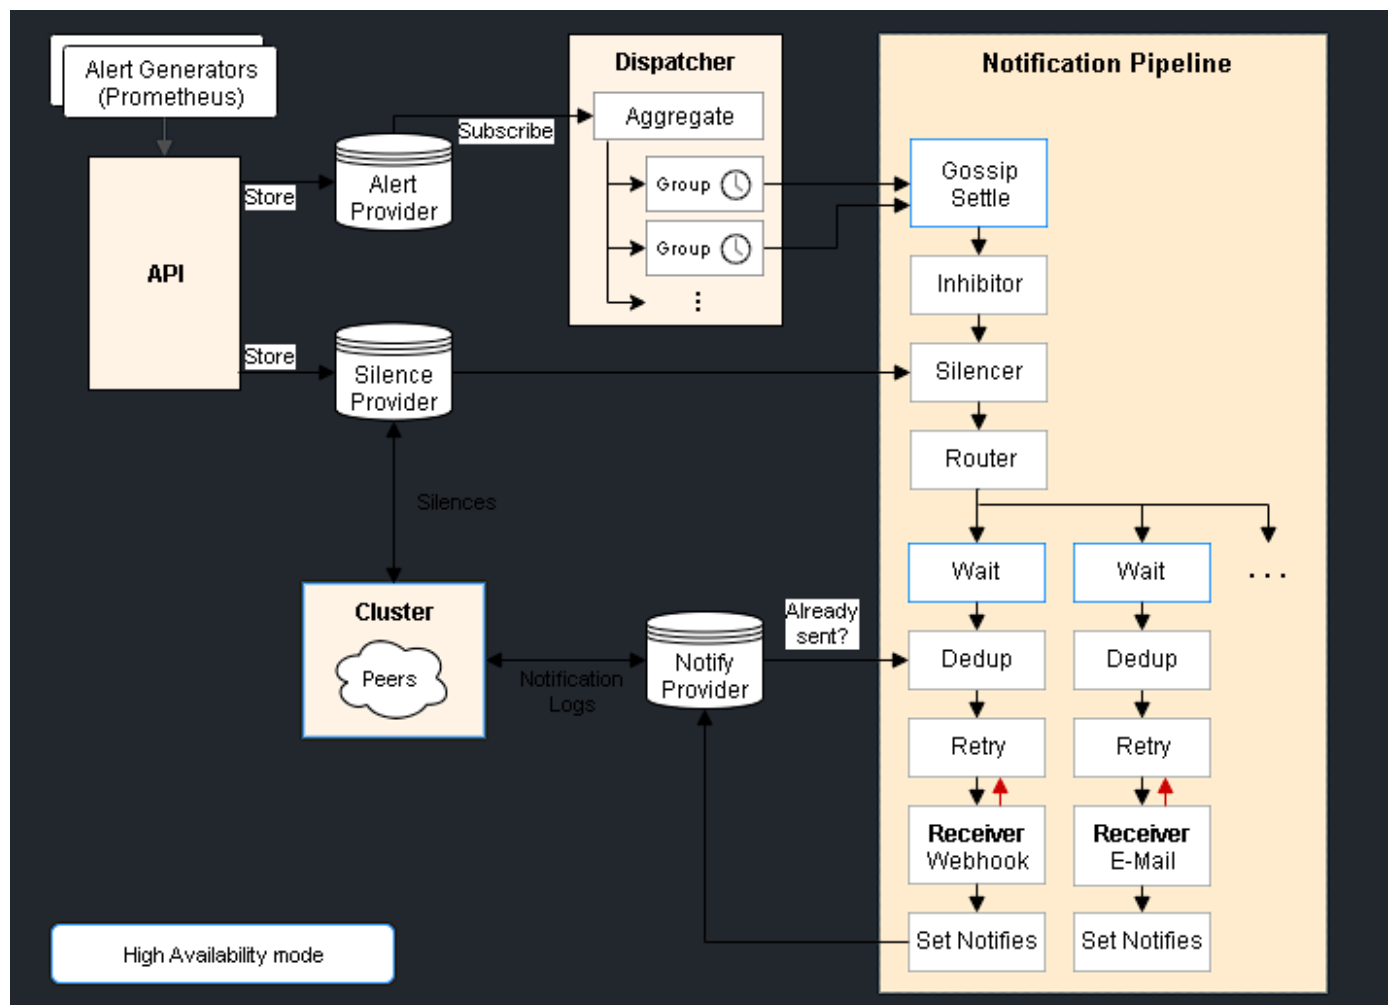

For enable scrap for node exporter, you can configure prometheus.

```
# Edit prometheus file and add job node
vim prometheus.yaml
```

```
...
scrape_configs:
- job_name: node
  static_configs:
  - targets: ['localhost:9100']
...
```

Restart prometheus service for apply new job.

## Alertmanager

For more information about Alertmanager access official documentation:  
<https://github.com/prometheus/alertmanager>

## Grafana

### Grafana Loki

### Grafana Tempo

### Grafana Alloy

## Contributing

Contributions are what make the open source community such an amazing place to learn, inspire, and create. Any contributions you make are **greatly appreciated**.

If you have a suggestion that would make this better, please fork the repo and create a pull request. You can also simply open an issue with the tag "enhancement". Don't forget to give the project a star! Thanks again!

1. Fork the Project
2. Create your Feature Branch ( `git checkout -b feature/AmazingFeature` )
3. Commit your Changes ( `git commit -m 'Add some AmazingFeature'` )
4. Push to the Branch ( `git push origin feature/AmazingFeature` )
5. Open a Pull Request
